DEHN SE shares its expertise in lightning protection at the ICLP 2024 in Dresden

Neumarkt, August 2024 - DEHN is looking forward to participating in the 37th International Conference on Lightning Protection (ICLP) 2024. The prestigious conference in Dresden from 1 to 7 September brings together experts and specialists from all over the world to discuss the latest developments and research results in the field of lightning protection. With a total of nine technical contributions, DEHN helps to create a specialist platform where international scientific and technological experts can exchange ideas and address the challenges of the future together.

As a pioneer in lightning and surge protection technology, DEHN can contribute over 100 years of experience and innovation to the industry. With a broad portfolio of products and services, the company sets benchmarks in quality and reliability. One example of this is ACI technology: the innovative Advanced Circuit Interruption (ACI) technology ensures reliable and durable surge protection, and its integrated switch/spark gap combination eliminates the need for an external back-up fuse.

"We are proud to be a Gold Sponsor at ICLP 2024 and to share our expertise in the field of lightning and surge protection," says Christian Höhler, CTO of DEHN SE. "This conference offers an excellent platform to exchange ideas with international experts from science and technology and to work together on solutions to meet both current and future challenges."
